PROFESSIONAL SUMMARY

Product Owner and Electronic Engineer with 5+ years of experience spanning Product Management, Industrial Automation, and Systems Testing & Verification. Currently Product Owner at Schneider Electric, leading the backlog and roadmap for three agile teams — device topology modeling, the platform's migration to a web-based environment, and multiuser collaboration & device integration — within an industrial automation software platform (EAE). Previously spent 3 years as a System Test and Verification Engineer at the same company, validating industrial automation software across international teams (France, India, Germany, Austria, USA) and producing 500+ documented bugs. Skilled in Agile/Scrum delivery, backlog prioritization, user story writing, cross-functional stakeholder alignment, and building AI-powered internal tools to streamline product and testing workflows. Trilingual, with international work experience across France, Austria, and Argentina. Open to Product Owner, Product Manager, and Team Leader opportunities.

CORE COMPETENCIES

Project Lifecycle Management • Product Backlog Management • Agile/Scrum Methodologies • User Story Writing & Acceptance Criteria • Sprint Planning & Refinement • Roadmap & Stakeholder Alignment • Cross-Functional Team Leadership • Requirements Analysis • Quality Process Improvement • Problem-Solving & Active Listening • Presentation & Communication Skills • International Team Collaboration • Continuous Improvement Mindset • Proactive & Creative Approach

PROFESSIONAL EXPERIENCE

Product Owner / Product Manager

April 2026 – Present

Schneider Electric | Carros, France

- Own the backlog for three agile teams — Topology, Web Development, and Multiuser & Device Integration — within an industrial automation software platform (EAE)
- Topology: manage the module that models industrial devices and their network connections, defining how users configure and validate these setups
- Web Development: own the backlog for the team driving the platform's migration to a web-based environment
- Multiuser & Device Integration: own the backlog for multiuser collaboration capabilities and third-party device integration
- Prioritize and refine the backlog based on business value and technical feasibility; write user stories with clear acceptance criteria
- Lead sprint planning and refinement sessions across all three teams; coordinate with developers, testers, and architects to keep delivery aligned with the roadmap
- Contribute to feature and UX design in an architect-adjacent capacity; lead cross-team alignment when scope overlaps with other platforms
- Develop internal AI-driven tools for Product Owner workflows, including a personal productivity application and AI-Azure DevOps integrations to streamline backlog refinement and reporting

System Test and Verification Engineer

March 2023 – April 2026

Schneider Electric | Carros, France

- Member of the Systems Verification team testing industrial automation software in an international environment (France, India, Germany, Austria, USA)
- Performed comprehensive software validation for industrial automation platforms, configuring complex test environments with PLCs, sensors, networks, and HMI systems, resulting in 500+ documented bugs
- Conducted bug analysis and root cause investigation, producing detailed technical documentation for development teams to resolve critical issues
- Executed System/Agile testing methodologies: test case creation, user story writing, and sprint planning participation
- Led quality process improvements through presentations and cross-functional collaboration with international teams
- Developed AI-powered tools to optimize testing workflows, including a bug report generator and an automated User Story Analyzer and Test Case Generator, integrated with DevOps using Ollama and Claude AI
- Applied IEC 61499 standards and industrial communication protocols (Modbus, OPC-UA, MQTT, EtherNet/IP, Profinet)
- Completed a 3-month assignment in Vienna, Austria, mastering EcoStruxure Automation Expert foundations and advanced system verification techniques

Automation and Test Engineer

June 2021 – February 2023

BGH S.A. | Río Grande, Tierra del Fuego, Argentina

- Led industrial automation projects from analysis through deployment, managing the complete project lifecycle
- Analyzed plant operations to identify and resolve production issues
- Managed budgeting, prototype design, commissioning, and project monitoring
- Designed and programmed collaborative robot (cobot) systems for manufacturing assembly lines
- Built custom electronic circuits and microcontroller solutions with sensors and actuators
- Created 3D models and prototypes using Fusion 360 and 3D printing
- Managed project documentation, requirements analysis, and stakeholder communication

Automation Engineer

April 2021 – June 2021

Eproc SRL | Rosario, Santa Fe, Argentina

- Developed industrial automation solutions using Siemens PLC, HMI, and SCADA programming
- Implemented SCADA systems for real-time monitoring and control of industrial processes
- Delivered projects within an Agile/Scrum framework with cross-functional teams

R&D Engineer – Radar Signal Processing

March 2020 – September 2020

ZF Autocruise | Brest, France (Engineering Internship)

- Developed a MATLAB application for analyzing automotive radar signal processing chains for autonomous driving systems
- Performed data acquisition using mmWave radar development boards and implemented signal processing algorithms
- Built a custom GUI with MATLAB App Designer to optimize the R&D team's workflow

TECHNICAL SKILLS

Product Management:	Azure DevOps, Jira, Agile/Scrum, Backlog Management, User Story Writing, Sprint Planning
Industrial Automation:	IEC 61499, Modbus, OPC-UA, MQTT, EtherNet/IP, Profinet, SCADA Systems, PLC Programming, EcoStruxure Automation Expert
PLC & HMI:	Siemens Step 7, TIA Portal, WinCC, Ladder Logic, Function Block Diagrams
Programming:	C, C++, Python, JavaScript, React, HTML/CSS, MATLAB, Node-RED
AI & Automation Tools:	Claude AI, ChatGPT, Ollama, Mistral, Gemini — local AI agent development, AI-powered bug analysis, and automated test case generation
Robotics:	Universal Robots (Polyscope), Collaborative Robot Programming
Embedded Systems:	STM32 (STM32CubeIDE), Arduino, Raspberry Pi, RTOS, Microcontroller Programming
CAD & Design:	Fusion 360, AutoCAD, Eagle PCB Design, Prusa Slicer, 3D Modeling
Web Development:	React, Bootstrap, Material UI, SASS, Firebase, REST APIs, SPA Development, SEO
Development Tools:	Visual Studio Code, Git/GitHub, DevOps, Quality Assurance
Protocols:	RS232/RS485, I2C, SPI, CAN Bus, Industrial Ethernet, TCP/IP

EDUCATION

Electronic Engineer — Universidad Nacional de Rosario (FCEIA), Argentina 2013 – 2021

Specialization: Power Electronics, Industrial Automation, Embedded Systems, Signal Processing, IoT, Telecommunications

International Exchange, Electronic Engineering — ENIB, France 2019 – 2020

École Nationale d'Ingénieurs de Brest. Includes an engineering internship at ZF Group; team project: sunlight simulator for solar panel testing

Diploma in Digital Transformation and Industries 4.0 — Universidad Tecnológica Nacional, Argentina 2022

Focus: Data Analytics, Cloud Computing, Cybersecurity, Robotics, Lean Management, Digital Transformation

Front-End Development Certificate — Coderhouse 2022

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- Advanced Training – Collaborative Robots (Cobots) Programming | Universal Robots
- Scrum Master – Agile Methodologies | Universidad Tecnológica Nacional
- Pneumatic Installations and Electropneumatic Controls | Universidad Nacional de Tierra del Fuego
- Ergonomics Training | AdEA
- Management Technologies for Productive Improvement | INTI
- Digital Marketing Fundamentals | Google Activate

LANGUAGES

Spanish: Native | **English:** Professional Fluency (TOEIC: 960/990) | **French:** Professional Working Proficiency (DELF B2: 87/100)

Selected Personal Project — Personal Portfolio & AI Chatbot: React, Material UI, react-i18next (English/French/Spanish), Cloudflare Worker backend with a Groq-powered LLM chatbot that answers visitor questions in real time. Built and continuously maintained end-to-end, deployed on GitHub Pages. ianchaya.github.io/portfolio-ianchaya
